

Walk-through of the platform if you set it for the first time:

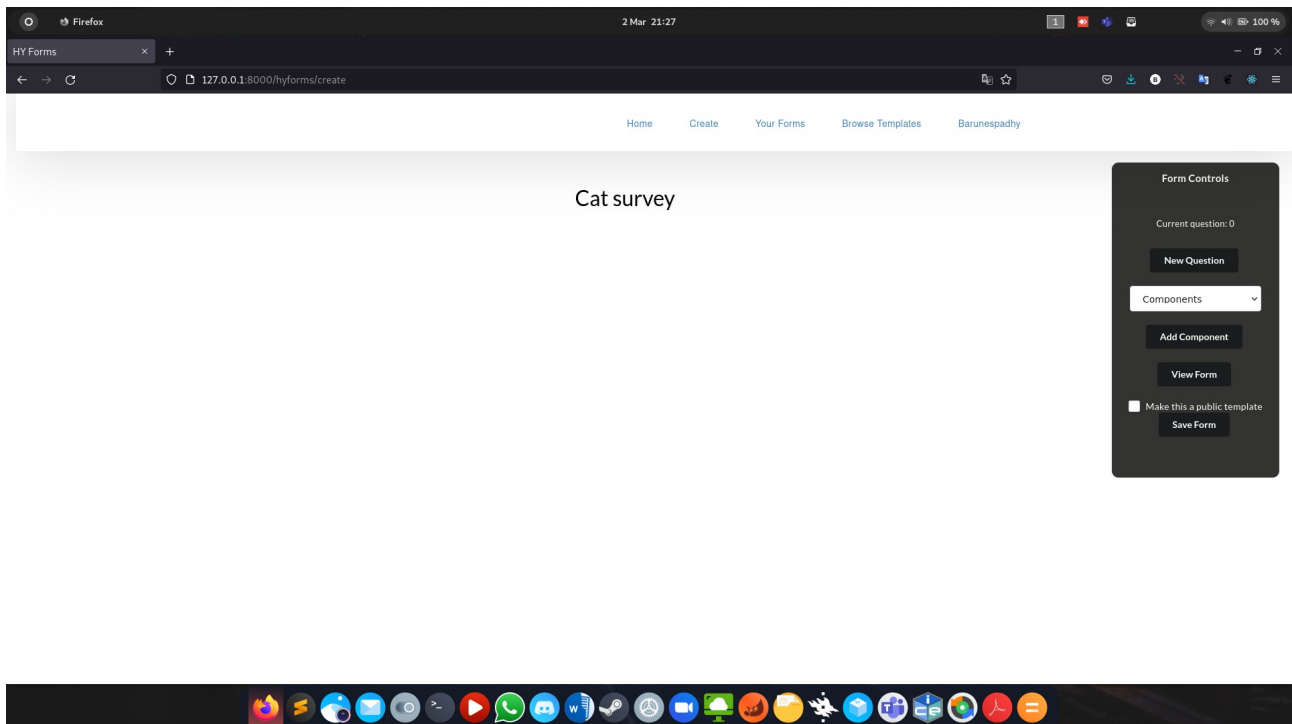

You will be first asked to login. If you don't have an account, create one using "Create an account". After account is created, click on "I am already a member" and login.

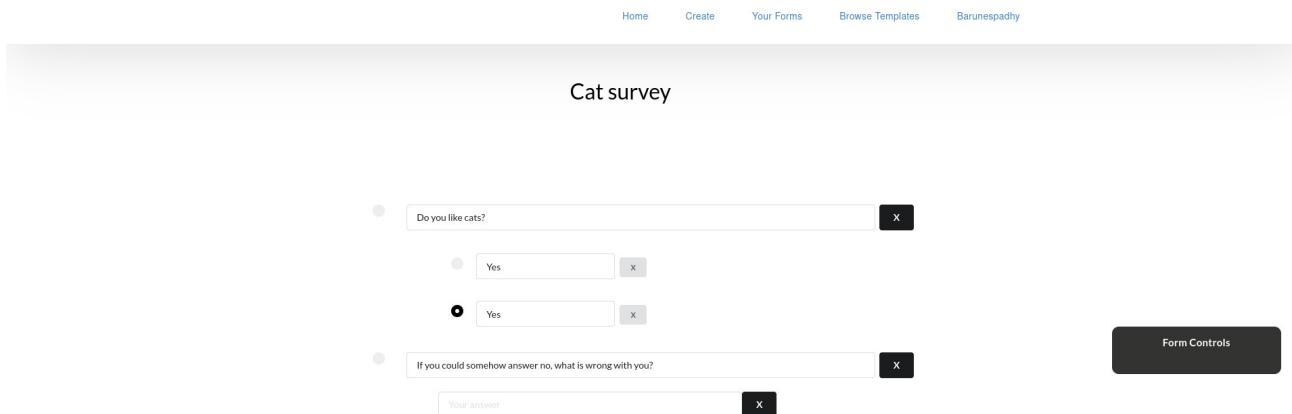

You will be greeted with the homepage. Click "Get started"

You will be navigated to form creation page. Enter a title and press enter or click on “Go!” to begin. Hover on “Form controls” to reveal options to add components.

Click on “New Question” to create a new question, then choose a sub question by first selecting the component. For now, there is only Radio Buttons, Single line and multiline text. Click on “add component” after choosing the component to add it to the question. Clicking on “X” removes the question/component. If a question is removed, all components go with it:

Click on “view form” to see how the form would look like upon sending to people. Click on edit form to go back to editing:

The screenshot shows a web browser window with the URL `127.0.0.1:8000/hyforms/create`. The page title is "Cat survey". The main content area contains two questions: "Do you like cats?" with two radio button options labeled "Yes", and "If you could somehow answer no, what is wrong with you?" with a text input field labeled "Your answer". On the right side, there is a "Form Controls" sidebar with the following options: "Current question: 2", "New Question" button, a dropdown menu set to "Single Line", "Add Component" button, "Edit Form" button, a checkbox for "Make this a public template", and a "Save Form" button. The top navigation bar includes links for "Home", "Create", "Your Forms", "Browse Templates", and "Barunespadhy".

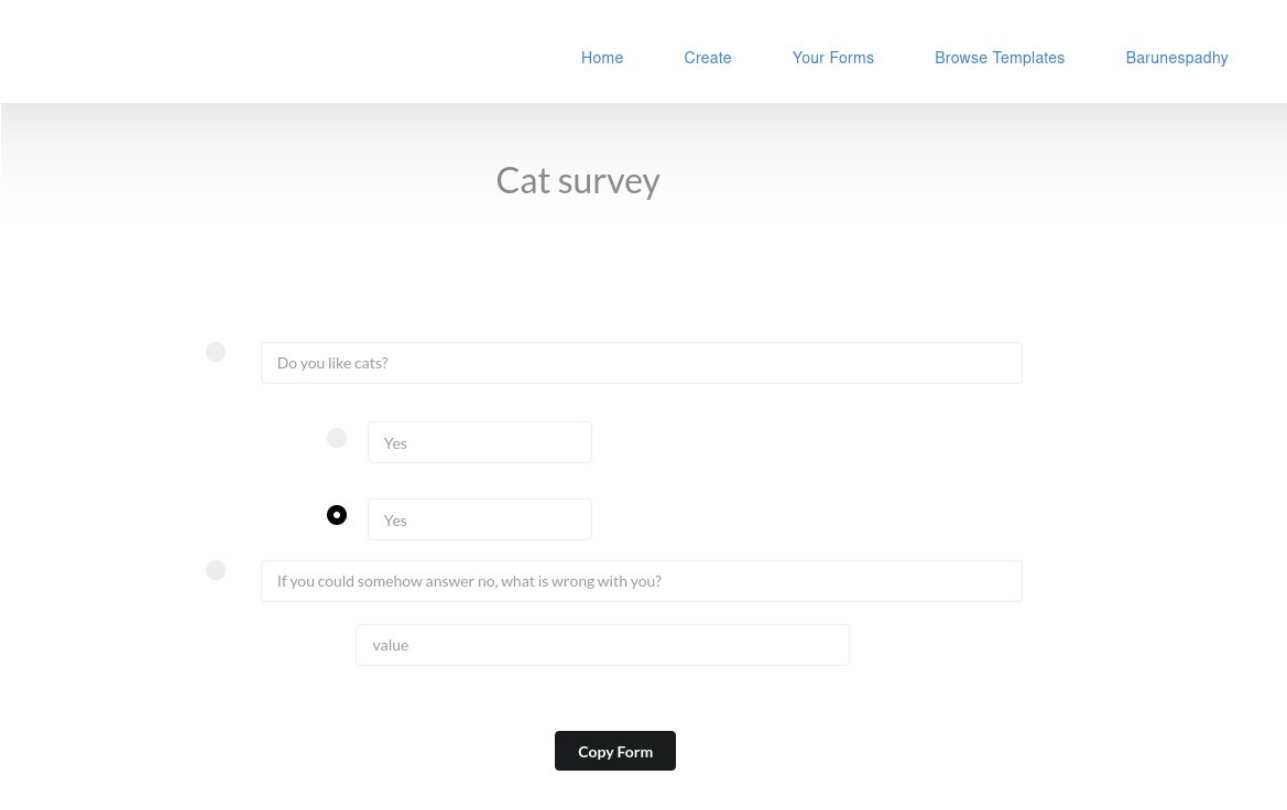

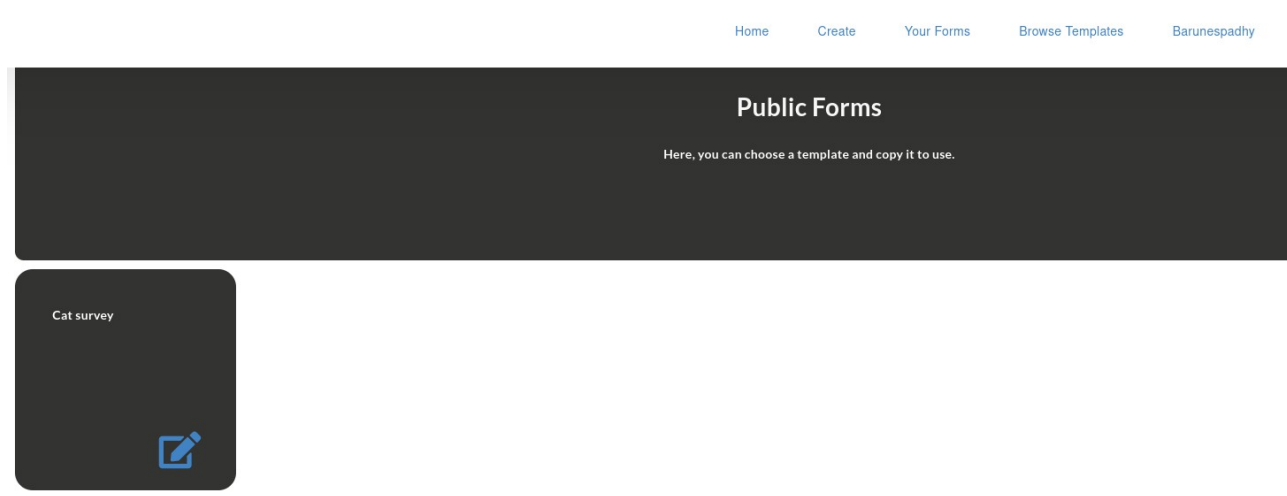

Check on “public forms” if you would like this to be added as a template, which will be visible in “Browse Templates” section. These templates can be accessed by anyone and they can copy this template to speed up their form creation process. If you do not wish to save it as a public template, simply click “save form” without checking “public form” option. For the purposes of this demonstration, I choose the option to make it public.

Go to “your forms” section. Here, you can see your created forms. Clicking on the “pencil” button will take you to the edit section, where you can edit the form (like add or remove questions) and copy the link of the form to be sent for filling up. Clicking on the “eye” option will show up the responses after filling the form.

Note: If no data was ever entered, clicking on eye button would result in a blank screen. In that case, click back button in browser and then hit refresh to get back to the “Your Forms” section.

The screenshot shows the "Your Forms" section of the HY Forms application. The header "Your Forms" is centered at the top. Below it, a message states: "Here, you can view your created forms, modify them and view the responses recieved." A card for the "Cat survey" form is displayed, featuring an eye icon and a pencil icon at the bottom.

In “Browse Templates” section, you can see the form saved as a template, and can be copied by someone else when “Copy Form” is clicked. This form can be accessed by anyone. Create a new account and you will be able to see this template in “Browse Templates”.

After copying the form link and then sending it to other people, they will see it like this:

Cat survey

Do you like cats?

☐ Yes

☐ Yes

If you could somehow answer no, what is wrong with you?

Submit

Note: You do not need an account to fillup a form. Open incognito and try it out.

After testing out form filling, go to “Your Forms” section and click on the eye icon. You will be greeted with a Download button. Click on it to download the file in excel format.

Note: The looping is bugged, so the responses don’t come in the right order, but they are all there. This will be fixed later.

Finally, to logout, click on your username, in this case, Barunespadhy, to logout.
